There are four Adjustment Tools: Levels, Curves, Graduated Filter, and HSL/Grayscale. You can also create a smart object and change any parts of the image that you'd like to modify later. This is also a very convenient way to make changes to an image without making a duplicate image. The Dodge and Burn tools can be used to lighten or darken the tonal range in images without skewing colors. The Auto Select tool can be used to create a mask that automatically selects the tonal range of the image. An Adjustment Layer can also be used to make changes to the image. The Harmonic Scissors tool uses the pixels in an image to create new pixels that are similar to the ones in your image. The result can be simple or complex, depending on the setting you choose. If your image is fairly uniform, it will likely look best using auto. The Liquify tools can be used to shape your image or create entirely new images. With the Rotate and Scale tools, you can create a mask that lets you apply the effects to a specific area of the image, rather than the entire image. The Warp tool allows you to make subtle changes to an image. The Spot Healing tool lets you alter an image's colors in specific areas where objects are out of focus. The Smudge tool allows you to go back and forth between changing the overall image and changing parts of the image you want. The Gradient tool allows you to broaden or narrow the color range of the tone that you are using. 933d7f57e6
